

GT Advanced Technologies, headquartered in Merrimack New Hampshire, is a diversified technology company with innovative crystal growth equipment and solutions for the global solar, LED and electronics industries.

Their core crystalline growth equipment and materials expertise in silicon, silicon carbide and sapphire deliver sustained value to the world's top manufacturers in the global PV, power electronics and optical markets.

“machine performance has exceeded our expectations”

“We at GT Advanced Technologies required a tool for unique machining applications. Fryer Machine Systems was able to meet our needs by heavily modifying a UM-30 to not only suit our application, but also to fit on our shop floor without modification to our building. The machine performance has exceeded our expectations in that it has improved process time significantly.”

“improved process time significantly”
