High Quality Toolroom Mill Features Ease of Use

Fryer Machine Systems has updated its MB series line of Toolroom bed mills.

“Designed by toolmakers for tool makers, the MB mill is by far the easiest mill to use in its class,” said a company spokesperson.

Full manual operation allows anyone in the shop to use the machine with little to no training.

In addition, the machine features Do One cycles that allow you to automatically mill, pocket, drill and tap, one step at a time. Manual operations and semi-automatic operations can be mixed to speed through one-piece production.

The MB machines also feature Shop Mill, an intuitive conversational programming system.

Developed by Siemens, this software speeds automatic programming and features interactive graphic screens and simulations. All Fryer machines feature industry standard G-code and may be used with all CAD CAM systems.
