

Todd Machine & Fabrication was founded in 1991 and provides custom machining of steel, aluminum, brass, stainless steels, plastics, and composites. TMF has used Fryer's High Performance Machining Centers for over 17 years. As a repeat client, TMF is extremely satisfied with Fryer's reliability, design and value.

“really good value for the money”

One of their favorite aspects of their MC-40 machine is that it is quiet and compact. The Fanuc controls also appeal to TMF since they are the industry standard. After purchasing their second Fryer machine, a MC-60, TMF was pleased to discover that Fryer is constantly improving upon machine designs.

“they get better all the time”

“It does everything they say it's going to do. I've had some time with Fryer, and I really don't have to worry about any problems. You take care of us. I bought this thing and I want to run it until it dies. It's a really good value for me. I'm very happy with it.”
